Puget Sound Energy
6905 S 228th St
Kent, WA 98032
September 1, 2026

Dear Puget Sound Energy Hiring Manager,

I am applying for the Engineer I – Substation Controls position with Puget Sound Energy. After touring PSE and seeing the control center firsthand, I was impressed by the teamwork, professional atmosphere, and technical level of the work. The experience strengthened my interest in building a long-term engineering career with PSE.

My background in electrical engineering and current work in power-system modeling and simulation have given me a strong technical foundation for this position. As a Power Systems Engineering Consultant, I develop and validate dynamic models, analyze transient system behavior, interpret industry specifications and control-system diagrams, and prepare detailed technical reports. This work has strengthened my problem-solving skills, attention to detail, and understanding of power-system controls and behavior.

I also have several years of hands-on electronics troubleshooting experience, including working from schematics and datasheets and using oscilloscopes, logic analyzers, signal analyzers, and other laboratory test equipment. Combined with my engineering background, this experience has given me a strong interest in work that connects electrical design and control systems with physical equipment.

I am particularly interested in developing my knowledge of substation control systems and applying my engineering and troubleshooting experience to the design, testing, and support of utility infrastructure. I believe the Engineer I position would provide an excellent opportunity to contribute my existing skills while continuing to develop as a power systems engineer at PSE.

Thank you for your consideration. I look forward to the opportunity to discuss my qualifications and interest in the position.

Sincerely,
Brian Torrence
